

1) Log in to Solace

The first page the user will see is *loginpage.html*, the image on the right.

username: **guest**
password: **student**

- a) Point out where the username and password should go.
- b) Point out how to submit the login form.

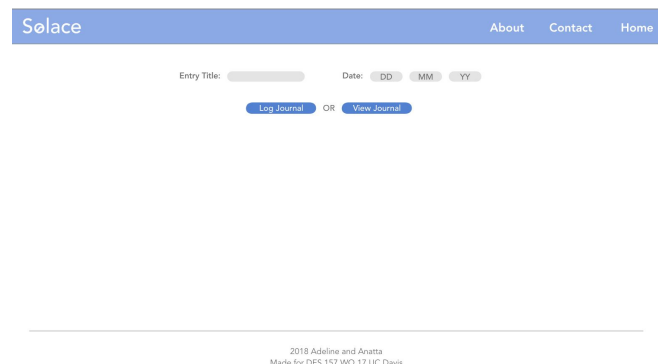

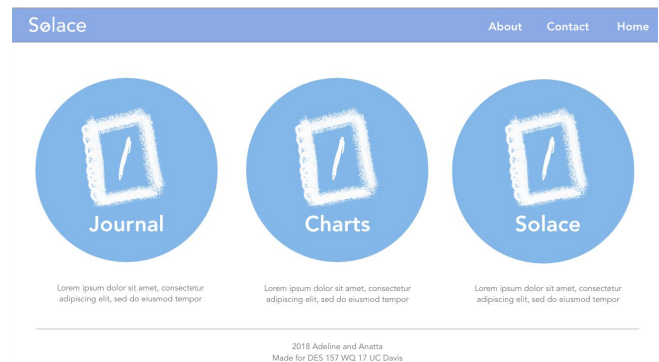

2) Access Journal

After logging in, the user will be directed to *homepage.html*, the image on the right.

- a) Point out where you would click in order to go to the **journal page**.

The user should be directed to *journal.html*, the image on the right, after clicking on the journal icon.

- b) Point out where the input (entry title and date) should go.
- c) Point out how to submit the login form.

A pop up text-box displaying the user's input should appear after submitting the form.

The user will speak into the mic and talk about something that happened to them today. The input will appear on the text-box.

- d) Point out how to rate how the user feels.
 - e) Point out how to submit the form.
- 3) Access Solace and play a song from the Spotify Playlist.

The image on the right shows what journal.html will look like after the user inputs data.

- a) Point out how the user can travel to the **solace page**.

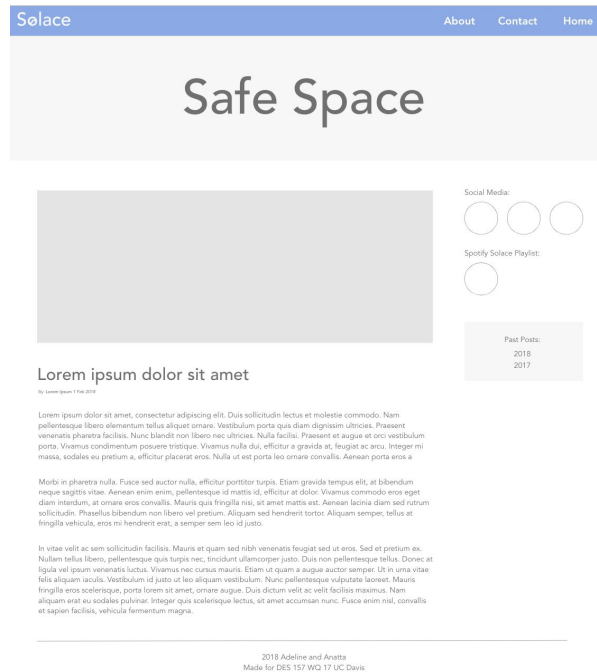

[Hint: To access the **solace page**, the user must travel to the home page, *homepage.html*]

The screenshot shows the 'Solace' web application interface. At the top is a blue header with the 'Solace' logo and links for 'About', 'Contact', and 'Home'. Below the header, there is a form for creating a new journal entry. It includes an 'Entry Title' text input field, a 'Date' field with dropdown menus for 'DD', 'MM', and 'YY', and two buttons: 'Log Journal' and 'View Journal'. Below the form, the date 'February 28, 2018' is displayed. A large, light gray rounded rectangle contains the text 'I'm listening... Say something...'. At the bottom, there is a rating section titled 'Rate how you feel:' with five circular buttons numbered 1 to 5. The text 'Not Good' is above button 1 and 'Very Good' is above button 5. At the very bottom, small text reads '2018 Adeline and Anatta' and 'Made for DES 157 WQ 17 UC Davis'.

This screenshot shows the 'Solace' web application interface after a journal entry has been submitted. The layout is identical to the previous screenshot, but the large text area now displays a block of Lorem Ipsum placeholder text. The rating section at the bottom shows that the number 4 button is selected, indicated by a dark gray background. The footer text remains the same: '2018 Adeline and Anatta' and 'Made for DES 157 WQ 17 UC Davis'.

The image on the right shows
solace.html

b) Point out how the user can
access the Spotify playlist.

Questions/Feedback:

- 1.) [*Measuring website success*] Is the website easy to use and navigate? Is there something you wish was there?

- 2.) [*Identifying strengths*] Which functions of the website is most important to you? Why?

- 3.) [*Identifying weaknesses*] Which aspect(s) prevented you from reaching your target destination in the website? Where does the website fail to meet your expectations?
